Assign shared exogenous seeds × five audit packages
naive · punitive · label · evidence · false-label
Paired seeds: DeepSeek 20; Haiku 10; Luna 10
Six agents; 40 ticks; precompute audit and feature-probe masks
Base decision: action, size and cited features
Prompt: rules, persona, portfolio, completed history,
latest feedback and current features
Trade and update
Valid base: order
Invalid base: no order
Realize market return
Evaluate audit; store
feedback for next prompt
Valid bases:
fidelity and citation
Feature probes
50% mask; valid base
News, then momentum
Reverse feature sign
Probes never trade
Sampled null re-ask
Feature-selected subset
Byte-identical prompt
Never trades; diagnostics
+ secondary sensitivity
Valid base + both valid probes: sensitivity and CSD
Precision also needs cited probe features
Recall also needs action-changing probe features
Missing nulls retain raw primary eligibility
Primary window ticks 20–39: match eligible coordinates across arms
Seed means → equal-seed contrasts
Four-test Holm within model; raw sign-flip outcomes
